

32.05Aug.Jenkins Best Practices & Integrations(JavaApp) Part1

5 August 2023 04:46 PM

• Jenkins Master Slave Architecture.

CJE

CCJE = Certified
Cloud Bees
Jenkins
Engineers.

Challenges

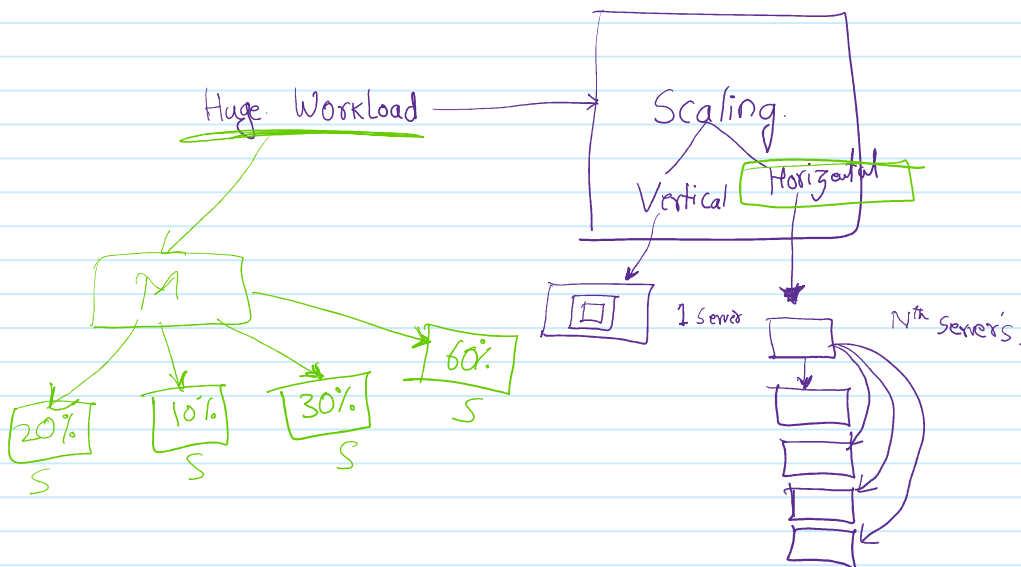

1] Parallel Build & Distributed Build.

◦ Parallel Execution

- Splitting the build Processes
Across multiple executors/agent's

2] Distributed Build

3] Workspace Cleanup

4] Caching Dependencies

- Cache Memory

5] Agent Scaling & Dynamic Provisioning

- EC2 → HA/FT
- Docker → K8s

6] Pipeline Optimization

- Remove Unnecessary Steps
- Structure
 - Conditional
 - Parallel Stages

7] Artifact Management

8] Avoid frequent things

9] Jenkins Master-Slave.

- JVM Config
- Heap Size
- Executors
- Agents

- JVM Config
- Heap Size
- Executors
- Agents

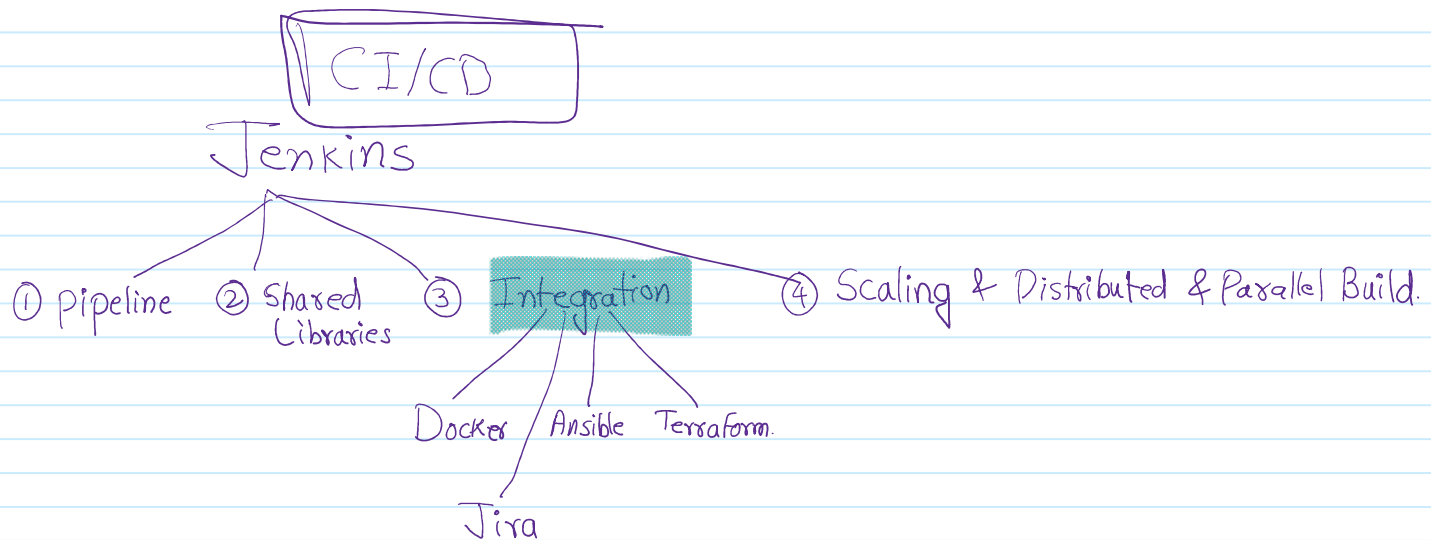

10] Scheduled Maintenance & Upgradation

• Deprecated

• Plugins

• Tools

• Database

① Github \longrightarrow Jenkins

② Github \rightarrow Jenkins \rightarrow Java Console App.

③ Git \rightarrow Jen \rightarrow Java \rightarrow Mun.

④ Grit → Jen → Java → Maven → Junit
 TestNG → Selenium

1. VCS to CI Server

1. Git hub Account , Repository

a. git clone <https://github.com/NubeEra-Samples/Java-Welcome-HelloWorld.git>

2. Java(Installed, Configure Paths)

```
➤ java -version
```

openjdk version "17.0.7" 2023-04-18

OpenJDK Runtime Environment OpenLogic-OpenJDK (build 17.0.7+7-adhoc..jdk17u)

OpenJDK 64-Bit Server VM OpenLogic-OpenJDK (build 17.0.7+7-adhoc..jdk17u, mixed mode, sharing)

```
➤ javac -version
```

javac 17.0.7

3. Jenkins

a. Install Jenkins(Single/Master-Slave)

- i. Linux/Windows

b. Start Single/Multiple Servers(Master Slave Architecture)

- Windows # `java -jar jenkins.war --httpPort=8081`

- Unix(Linux/Mac) # systemctl restart jenkins

c. Configure Credentials

i. Type : Username & password

- ii. Username : GitHub-User-Name

- iii. Password/Token : Token

d. Install Plugins

i. GitHub Integration

e. Create Pipeline
